

# Galaxy gets works approval

GALAXY Resources Limited has secured a works approval and licence to operate from the Department of Environment and Conservation, permitting them to begin construction of the minerals processing plant at Mt Cattlin in Ravensthorpe.

The works approval allows Galaxy to commence the earthworks and construction of the minerals processing plant with the associated site infrastructure at Ravensthorpe.

Managing Director, Iggy Tan, said that this is a very significant milestone for the project.

“The only outstanding approval for the commencement of the project is the Mining Approval from the Department of Mines and Petroleum DoMP to begin prestrip and mining,” he said.

“The mining approval process is well advanced and Galaxy expects to obtain final approval within the next month.”
