

## Feasibility study to start

AFTER receiving positive results from a Pre-feasibility Study (PFS) for their Mt Cattlin lithium carbonate plant in Ravensthorpe, Galaxy Resources Limited has announced plans to complete a Definitive Feasibility Study (DFS) of a lithium carbonate plant in China.

Galaxy has chosen Hatch Project Consulting Shanghai Co Ltd to complete the DFS.

Galaxy Managing Director Iggy Tan said the Company had selected Hatch China due to its sound knowledge of People's Republic of China codes and regulations and its understanding of local cultures, conditions and requirements for project development.

Mike Kitney from MSP Engineering Pty Ltd, who was study manager for the project's PFS, will head the DFS team.
