About Galaxy (ASX: GXY)

Galaxy Resources Limited (Galaxy) is a specialty minerals company focusing on lithium and tantalum production. Galaxy has completed a definitive feasibility study (DFS) which suggests the Mt Cattlin lithium / tantalum project is commercially viable based on a processing rate of 1 million tonnes per annum over a 15 year mine life. The Company is planning to commence the development of the mine and the construction of the processing plant in mid 2009 with first concentrate production scheduled for Q3, 2010.

The company has also commenced a preliminary scoping study into the value adding downstream production of lithium carbonate (Li₂CO₃).

Lithium concentrate and lithium carbonate raw materials face high future demand growth due to advances in long life and efficient batteries for use in sophisticated electronics, hybrid and electric vehicles, mobile phones and computers.
